

# Scope

The assignment is to implement this provided mockup using React.js

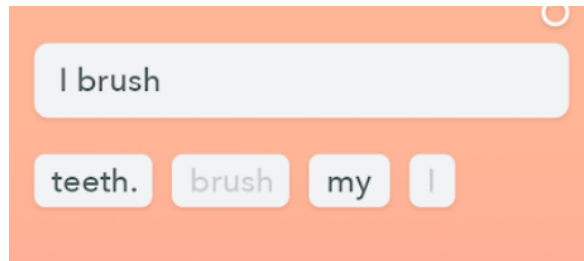

Mobile:

You can see an example of how this exercise works with an [older version](#) of our application.

## Requirements:

1. Implement the mockup with strong attention to detail.
2. The exercise works as follows:
  - a. A user clicks on one word at a time
  - b. As a user clicks on each word button, that word appears in order in the larger text box

- c. If a user clicks on the  button, the exercise resets
3. The layout should be responsive, with the content on the right moving below the content on the left. See the above screenshot for the mobile layout.
  4. The picture above shows the design using a background image. There is an image for mobile and desktop.
  5. Typography and avatar image are up to you.

## Assets

- All required assets are included in the Drive folder.

## Testing

- Please add at least one test for any part of the application

## Deliverable

- Zipped project folder with source code.
  - Please name it **first\_name\_last\_name\_nominis.zip**
- Readme that explains any additional steps needed to build or run the project
  - Include notes about any assumptions made
